Literature Survey Report Assessment Rubric

Criteria	Excellent (>=70%)	Proficient(>=60%)	Developing(59%-50)	Needs Improvement (<50%)
Comprehensiveness	Covers a wide range of relevant and credible sources; demonstrates thorough understanding of the field.	Covers a good range of relevant sources but may miss some key studies or emerging trends.	Covers some relevant sources but lacks depth or breadth; key areas are overlooked.	Limited coverage with few relevant sources; critical gaps in understanding of the field.
Critical Analysis	Provides deep analysis, comparing and contrasting perspectives, identifying gaps, and synthesizing insights.	Analyzes sources effectively but may lack some depth in comparing perspectives or identifying gaps.	Minimal analysis; relies heavily on description rather than evaluation or synthesis.	Little to no analysis; sources are summarized without critical evaluation or synthesis.
Organization and Structure	Clear and logical structure with well-defined sections (e.g., introduction, thematic organization, conclusion).	Mostly well-structured, but sections may be uneven or transitions slightly abrupt.	Some structure present, but sections may be unclear or disorganized, leading to a confusing flow.	Poorly organized; lacks clear sections or logical progression, making it hard to follow.
Integration of Sources	Sources are seamlessly integrated into the narrative; citations are precise and properly formatted.	Sources are integrated but may lack flow or consistent formatting; occasional citation errors.	Sources are inconsistently integrated; frequent formatting or citation errors.	Sources are poorly integrated, irrelevant, or missing; citations are largely incorrect or absent.
Identification of Trends	Clearly identifies key themes, trends, and debates in literature; connects findings to research goals.	Identifies some key themes and trends but does not fully explore their implications.	Mentions themes or trends but without clarity or strong connection to research goals.	Fails to identify key themes, trends, or debates; disjointed or irrelevant to research goals.

Criteria	Excellent (>=70%)	Proficient(>=60%)	Developing(59%-50)	Needs Improvement (<50%)
Clarity and Language	Writing is precise, academic, and free from errors; technical terms are well-explained.	Writing is clear and mostly error-free, but may lack conciseness or precision in some places.	Writing is unclear or overly simplistic; several grammar, spelling, or terminology errors present.	Writing is unclear, informal, or riddled with errors; terminology is poorly explained or misused.
Conclusions and Future Work	Provides insightful conclusions, clearly linked to the reviewed literature, and suggests meaningful future research directions.	Provides reasonable conclusions and some suggestions for future research, but lacks originality.	Conclusions are vague or weak; little mention of future research directions.	Conclusions are missing, unclear, or irrelevant; no mention of future research.
